

BlastMatch™

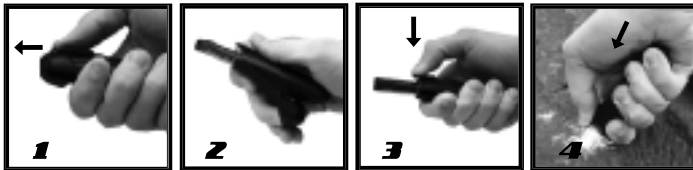

Fire Starter

Compact, All-weather, One-handed

The BlastMatch™ is a unique one-handed fire starter that generates intensely hot sparks with minimal effort. This all-weather fire starting system is not affected by wind, rain or other adverse weather.

DIRECTIONS:

1. Place thumb on BlastMatch™ cap next to striker tab, against the lip of the cap. Press in and up to release the cap, exposing the spring-loaded flint bar. Do not pull up on striker tab.
2. Push end cap over flint bar and slide to rear of BlastMatch™ body. Fit cap on rear of body.
3. Place thumb on striker tab and press down with medium pressure. Continued on back.

4. While maintaining pressure with your thumb on the striker tab, plunge the body of the BlastMatch™ down the striker bar. Initiate a few strikes to remove black oxide coating and expose bare flint.
5. Prepare tinder shavings or other fire starting material. We recommend using WetFire™ Tinder, but other tinders will work. Hold tip of BlastMatch™ flint bar next to tinder and strike.

The BlastMatch™ works even if it gets wet! Simply wipe excess water off of the flint bar and strike as normal.

CAUTION!

- The BlastMatch™ generates intensely hot sparks. Keep away from anything you do not want to burn.
- Do not allow the flint bar to bend out of line with plastic BlastMatch™ body. This may snap off or damage the striker bar.
- Do not pull striker tab back or away from the BlastMatch™ body.
